Software Engineering Jobs at AT&T Labs

AT&T is the largest telecommunications company in the world. Serving over 100 million people for their personal, small or large business needs, our multi-faceted R&D group takes on some of the most sophisticated systems and challenges of our time.

We are looking for inventive scientists to help us reinvent the next generation of AT&T’s intelligent network and services and reimagine new ways to serve our customers. With its deep and vibrant research environment and close links to top academic institutions, a job at AT&T Labs offers rich interactions and interesting problems with the potential to have your research realized in products and services that will be used world-wide.

In AT&T Labs’ Intelligent Services and Platform Research organization, we invent a new breed of adaptive technologies and intelligent software that enable the rapid creation of exciting new services. We are looking for a number of strong software engineers at junior and senior levels who have deep expertise in areas of software programming, software architecture and design, and open source. The candidate will collaborate with AT&T’s businesses including connected car, digital life, customer care, consumer mobility, enterprise mobility and big data.

**Required Qualifications**

- Master’s or Ph.D. degree in Computer Engineering, Software Engineering, Computer Science, Electrical Engineering, Electronic Engineering, or Physics from an accredited university.
- Proven track record of software programming in areas of communication, autonomous services, multimedia, cloud services, big data and/or machine learning
- Strong experience with software programming and open source platforms such as Hadoop
- Experience creating, implementing, and optimizing services on distributed computing and cloud environments.
- Analytics experience working with large scale, industrial-size data sets.
- Strong communication, problem solving and collaboration skills.
